

Fast, simple, easy installation.

Compact size, light weight and modular fit make SELECTedge a real pleasure to install.

Unlike hard-to-straighten coiled plastic edging, SELECTedge Units won't bend or break and are easy to handle. Weighing less than 4 lbs. each, the units fit comfortably in the palm of your hand, making installation a breeze.

All you need are:

Materials:

SELECTedge Units

- 32 Units = 40 Inch Diameter Ring
- 10 Units = 3 Linear Feet of Edging
- 100 Units = 30 Linear Feet of Edging

Sand

- 1 cu ft = 20 Linear Feet of 2" x 4" Sand Base

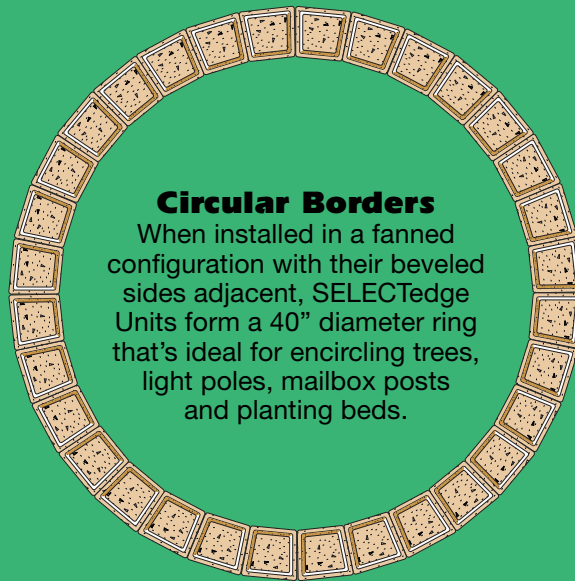

Tools:

Shovel, Rubber Mallet (or Hammer and a Length of Two-by-four).

Optional Tools — Grub Hoe, Tape Measure, String (or Spray Paint, or Garden Hose).

Instructions:

1. Layout your border plan and mark it with string, spray paint or a garden hose. (Placing SELECTedge Units in position on the grass or soil will help you determine your best plan.)
2. Decide if you'd like to install your SELECTedge border flush with your lawn or slightly raised. (Maximum recommended reveal: 1" above surrounding surfaces.)
3. Dig a 4" wide trench deep enough to allow for the height of a SELECTedge Unit set to your desired depth plus a 2" bed of sand.
4. Pour, and level a 2" sand base in the trench.
5. Install SELECTedge Units as shown in this brochure.
6. Seat each unit by tamping it down with a rubber mallet. Or lay a two-by-four across several units and sharply tap its midpoint with a hammer.
7. Backfill spaces, between the units and the trench walls, with loose dirt and step it down firmly.

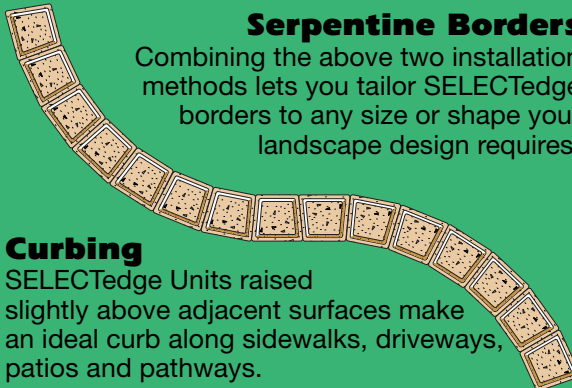

Straight Borders

Placing SELECTedge Units side by side in an alternating pattern produces straight, linear edging up to any length desired.

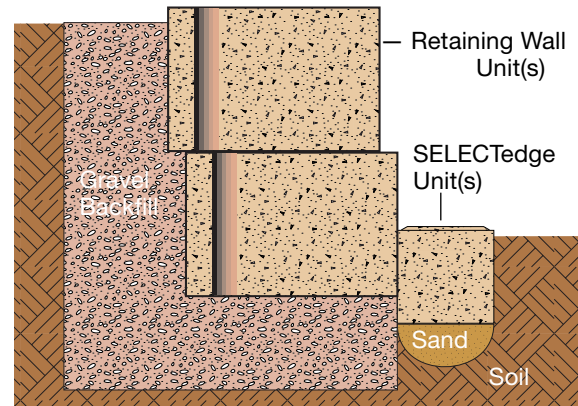

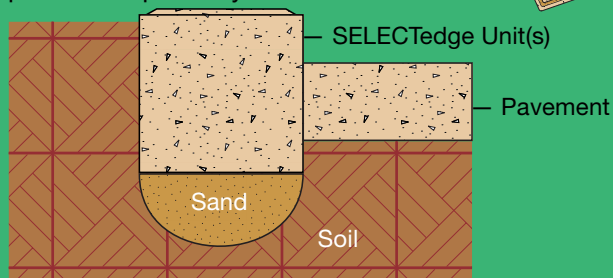

Serpentine Borders

Combining the above two installation methods lets you tailor SELECTedge borders to any size or shape your landscape design requires.

Curbing

SELECTedge Units raised slightly above adjacent surfaces make an ideal curb along sidewalks, driveways, patios and pathways.

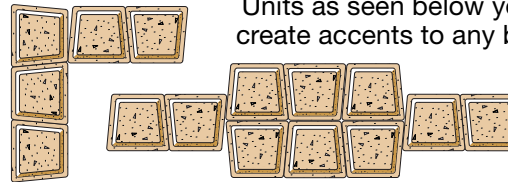

Wall & Fence Bases

For the ultimate in beautiful, easy-care landscape edging, install a SELECTedge border at the base of fences, retaining walls and building foundations.

Accents & Combinations

By arranging the SELECTedge Units as seen below you can create accents to any border.

SELECTedge®
 Gives your
 landscape
 the ultimate
 finishing touch...
 while reducing
 maintenance

Distinctive decorative edging... bordered only by your imagination!

Made of smooth, molded concrete, affordable SELECTedge Units are a uniquely simple concept in beautifully decorative landscape edging.

The modular, trapezoidal shape of each SELECTedge Unit offers endless design possibilities, giving you unlimited flexibility in planning your borders. And SELECTedge's natural scale, color and good looks blend comfortably with any landscape.

SELECTedge[®]
Simply perfect.

The solid, 3-5/8" wide SELECTedge border provides a broad barrier that effectively prevents grass from encroaching on protected areas.

U.S.. Patent #5,564,240

SELECTedge your way toward maintenance-free landscape borders.

- Ideal for garden edging, tree rings, planting beds and pavement borders.
- Flexible, modular design fits any border plan.
- Flush installation eliminates grass trimming.
- Economical — Superior quality at a competitive price.
- Designed for easy installation with professional results.

The flat, flush SELECTedge top surface lets you run the wheel of your lawn mower right on top of the unit. So you can easily mower-cut grass right up to your SELECTedge border. And eliminate tedious, time-consuming grass trimming and "weed eating" all around your yard.
